SECTION 11: Toxicological information

11.1. Information on toxicological effects

Acute toxicity: Assessment

Based on the available data acute toxic effects are not expected after single oral exposure. Inhalable aerosols containing amino functional polysiloxanes may cause harmful effects in the lung in animal experiments. Due to the large influencing parameters (e.g. amine function, degree of substitution, viscosity, composition) an estimation of the toxicological effect on the lung is not possible for untested products of this category. In such cases exposure to inhale aerosols must be prevented by adequate technical measures.

11.1. Information on toxicological effects

Germ cell mutagenicity Carcinogenicity

No mutagenic effects reported.

No carcinogenic effects reported.

Reproductive toxicity

No teratogenic effects reported.

STOT-single exposure

May cause drowsiness or dizziness.

STOT-repeated exposure
Aspiration hazard

Not expected to cause organ damage from prolonged or repeated exposure.

Repeated or prolonged exposure

Product may pose an aspiration hazard.

Prolonged or repeated exposure of methanol may cause: irritation of the mucosa, nausea, vomiting, headaches, vertigo and visual disorders, acidosis, spasms, narcosis, and coma.
